Current Production Logging Tools

All of Century's Tools digitize the sensor measurements downhole. This minimizes interference from varying wireline cable lengths, and other factors that can alter the data. All measurements from Century Tools are calibrated, and are recorded in engineering units.

WESTERN U.S. PRICE SCHEDULE Prices Effective: JAN 1, 2010

SERVICE RATE:	\$ 750.00
FOOTAGE RATES:	
 STANDARD COAL DENSITY LOG (Gamma Ray, Caliper, Resistivity, Density) 	\$ 0.65/ft
2. E LOG SUITE (Gamma Ray, 16/64 Inch Normal, SP, SPR, Deviation, Option)	\$ 0.65/ft onal Neutron)
3. FULL WAVE FORM SONIC VELOCITY (Gamma Ray, Delta Time, N/F Time, Sonic Variable Density	\$ 0.85/ft ')
4. 3 ARM CALIPER LOG	\$ 0.45/ft
5. GYRO DEVIATION SURVEY (Through Rods Deviation)	\$ 1.25/ft
6. ACOUSTIC TELEVIEWER LOG (Travel Time and Amplitude for Fracture Identification)	\$ 1.50/ft
500 Foot Minimum Footage Charge per Tool Used.	
ADDITIONAL CHARGES	
MILEAGE CHARGE (Each Way)	\$ 1.50/mile
STATE RADIATION FEE (For Density and Neutron logs) (Maximum per customer charge of \$ 800 per year)	\$ 200.00/day
WIRELINE CHARGE (Un-logged Footage Interval)	\$ 0.30/ft
STANDBY CHARGE (Two Hours Free Standby per Day) (Based on a 10 hour work day / 12 hour port to port)	\$ 100.00/hr
EXTRA LOG PLOTS (Three Provided Free with Each Hole)	\$ 10.00/copy
PROCESSING TELEVIEWER IMAGE	\$ 150.00/hr

Dispatch Number: 254/760-9788

SERVICES PER CENTURY TERMS AND CONDITIONS

Hello Doug,

I am back from Texas today, so just catching up on some email traffic. We will use our Western Price Schedule for your logging costs. Some tools are not listed, as summarized below.

- 1. Dipmeter, \$1.00/ft
- 2. Mag. Susc. \$.65/ft
- 3. Spectral Gamma, \$ 1.00/ft
- 4. EM Flowmeter, 1.00/ft (this tool was being shipped from Australia last week, so hopefully it will arrive in time).

I think that will cover it.

Regards, Brian P.

9411 Logging Tool Back | Product Description | User Guide | Sample Log

Dipmeter Product Description

H(2)

Background Information

The Dipmeter tool is a formation strike and dip directional probe primarily used in mining and environmental logging applications. Additionally, the tool also records natural gamma, X-Y calipers, and borehole deviation is computed from the slant angle and bearing measurements calculated from the inclinometer and magnetometer sensors. To ensure accurate strike and dip measurements in small-diameter holes, special care should be taken when calibrating the calipers to maximize their accuracy.

9804 Series Acoustic Televiewer

Product Description

Background Information

The Acoustic Televiewer takes an oriented "picture" of the borehole using high-resolution sound waves. This acoustic picture is <u>displayed</u> in both amplitude and travel time. This information is used to detect bedding planes, fractures, and other hole anomalies without the need to have clear fluid filling the boreholes. The televiewer digitizes 256 measurements around the borehole at each high-resolution sample interval (.005 meters/.02 feet). This data is oriented to North and displayed real-time while logging using the Visual Compu-Log software. Analysis includes color adjustment, fracture dip and strike determination, and classification of anomaly. It allows information to be <u>displayed</u> on the graphical screen, plot, and in report format. Optionally, the tool can be equipped with a natural gamma sensor.

Featur	es
Properties Measured (see diagram)	Tool Specifications
1. Natural Gamma: Offset: 30.48 cm (12 in.) Scintillation (NG): 0 to 10,00 API, Accuracy +/-5 percent 2. Deviometer: Offset: 175 cm (69 in.) Natural Gamma, Neutron (Deviation Option)

Product Description

Background Information

The Natural Gamma, Neutron logging tool is designed for open and cased hole use. In open holes the neutron log may be converted to porosity units based on a limestone, sandstone or dolomite matrix. The tools small diameter makes it useful for logging Natural Gamma and Neutron through drill rods in cases where the hole is to unstable to be logged open hole. Natural Gamma, X-Y Inclinometers and Azimuth are optional.

9320 Series Full Wave Sonic

Product Description

The Full Wave Sonic tool contains a single transmitter and dual receiver to record formation travel times. The full wave form data is also recorded simultaneously, along with near and far travel times, borehole-compensated delta time, calculated sonic porosity, receiver gains, near/far amplitudes and natural gamma. The sonic or acoustic log uses the basic principle of sound waves traveling through a media. The Century sonic system uses a single transmitter and dual receiver system for recording the travel times of the formation. The receivers are spaced approximately 2 and 3 feet, from the transmitter. Therefore, a 0.3 m (1 ft.) calculation can be made to measure this interval transit time. Additionally, the 9320 can be upgraded for cement bond logging, by adding a casing collar locator (see below for link).

E-M Flowmeter

Product Description

Background Information

The E-M Flowmeter tool is used in the environmental and hydrology industries to measure fluid movement in a borehole. It incorporates Quantum Engineering s "EBF" electromagnetic sensor. The instrument measures flow rates using the principal of Faraday's Law of Induction. The downhole probe consists of an electromagnet and two electrodes located 180 degrees apart and 90 degrees to the magnetic field inside of a hollow cylinder. The voltage induced by a conductor moving at right angles through the magnetic field is directly proportional to the velocity of the conductor (water) through the field. The tool is capable of measuring low velocity flow rates down to less than 50 ml/min and increased flow rates to 40 liters/min, through the tool's 1 inch inside diameter sensor. When using the tool to measure low velocity flow rates a rubber skirt is attached to the outside of the sensor to block off the bore hole and force the fluid to pass through the 1 inch diameter opening inside the sensor coil. The Compu-View Software program is designed to allow the automatic collection of data at selected static stations in the borehole. When measuring faster flow rates the rubber skirt is typically removed and the tool is run in either the static station or dynamic mode. The tool has no moving parts.

Features	
Properties Measured (see diagram)	Tool Specifications
1. Flowmeter: Electromechanical	Length: 142 cm (56.0 in.)
Offset: 139.7 cm (55.0 in.)	Temperature: 60 C (140 F)

9074 Series Three Arm Caliper

Product Description

Background Information

The 9074, 8074, 7074 and 6074 Three Arm Caliper logging tools, are a three-arm caliper configuration used to measure the diameter of the borehole. They can be used in both open and cased holes. Natural Gamma and the casing collar locator are optionally available. However, when configured with both the natural gamma and casing collar locator the tool is slightly longer.

Features		
Properties Measured (see diagram)	Tool Specifications	
1a. Natural Gamma: (optional)	Tool Length:	
2.2 x 10.16 cm (0.875 x 4.0 in.)	With Short-arms: 226 cm (89 in.)	
NaI Scintillation	With Long-arms: 264 cm (104 in.)	
Offset: 14.6 cm (5.76 in.)	Temperature: 85 C (185 F)	
1b. Casing Collar Locator: (optional)	Diameter: 50.8 mm (2.0 in.)	
Dual magnet and coil assembly	Pressure: 281 kg/cm ² (4000 PSI)	
Offset: 14.6 cm (5.76 in.)	Weight:	
2. Three Arm Caliper:	Short-arm: 18.5 kg (48 lbs.)	
Short- or Long- arm configuration, motor operated	Long-arm 20.8 kg (54 lbs.)	
Sensor Offset:	Logging Speed: 9 m/min. (30 ft./min.)	
Short-arm: 220.4 cm (86.8 in.)	Tool Voltage Required: 56 VDC	
Long-arm: 241.0 cm (94.9 in.)	1001 voicinge required. 30 VDC

Multi-Parameter E-Log, Neutron (Deviation Option)

Product Description

Background Information

The Multi-Parameter E-Log, Neutron logging tool was developed to replace the 9055 which was historically Century s most popular tool. The tool duplicates all parameters on the 9055 while adding the 16 inch normal, 64 inch normal, and lateral resistivities. The 9057 natural gamma circuit features a low dead time and the ability to measure very high count rates making it a favorite for uranium logging. The tool records ten different parameters simultaneously in one pass of the borehole. The ten parameters are the following: natural gamma, spontaneous potential, single point resistance, 16 in. normal resistivity, 64 in. normal resistivity, 48 in. lateral resistivity, neutronneutron, temperature, delta temperature, slant angle (tilt) and azimuth (bearing). Slant angle, azimuth, and natural gamma are optional.

Features		
Properties Meas	ured (see diagram)	Tool Specifications
1. Natural Gamma: 2.2 x 10.16 cm (0.875 x 4.0 in.) Nal Scintillation Offset: 14.7 cm (5.8 in.) 2. 64 in. Normal Resistivity: Offset: 109.2 cm (43 in.) 3. 16 in. Normal Resistivity: Offset: 170.2 cm (67 in.) 4. Neutron-Neutron: He ³ Detector 2.54 cm x 15.2 cm (1 in. x 6 in.) Offset: 200.7 cm (79 in.)	5. Lateral Resistivity 48 in. Offset: 139.7 cm (55 in.) 6. Spontaneous Potential: +/- 0.1 mv resolution Offset: 27.7 cm (10.9 in.) 7. Single Point Resistance: +/- 0.1 ohm resolution Offset: 190.5 cm (75 in.) 8. Temperature & Delta Temperature: 0.004 C (0.007 F) resolution Offset: 220.5 cm (86.8 in.) 9. Slant Angle & Azimuth: 3-axis magnetometer and 2-axis inclinometer Offset: 200.7 cm (79 in.)	Length: 237 cm (93.6 in.) Temperature: 80 C (176 F) Diameter: 53 mm (2.1 in.) Pressure: 281 kg/cm² (4000 PSI) Weight: 15 kg (33 lb.) Logging Speed: 9 m/min. (30 ft./min.) Tool Voltage Required: 36 VDC

Spectral Gamma

Product Description

Background Information

The Spectral Gamma tool is a three-channel analysis of the gross gamma ray spectrum as it relates to potassium, uranium, and thorium content. An internal energy source of less than 1 micro-curries of Cs137 is used to excite the crystal and to stabilize the electronics prior to logging. The spectral window is recorded via a 256 channel spectrum board so that the different energy levels from the formation can be analyzed.

Features		
Properties Measured (see diagram)	Tool Specifications	
1. Potassium (K)	Length: 167 cm (65.75in.)	
Percent 40	Temperature: 65 C (150 F)	
Offset: 135.63 cm (53.4in.)	Diameter: 60.96 mm (2.40 in.)	
2. Uranium (U):	Pressure: 232 kg/cm ² (3000 PSI)	
Parts Per Million	Weight: 16.82 kg (37 lb.)	
Offset: 135.63 cm (53.4in.)	Logging Speed: 1.5 m/min. (5 ft./min.)	
3. Thorium (T) Offset: 135.63 cm (53.4in.)	Tool Voltage Required: 60 VDC

9239 Series Compensated Density

Product Description

Background Information

The Series 9239, Compensated Density logging tool uses the two focused density detectors to compute borehole compensated density real time while logging. No post processing required to produce CDL bulk density. Additionally, the tool also records natural gamma, caliper, and focused guard resistivity.
