15. Describe Proposed Operations (Use this space for well activities only. See instructions for current well conditions on reverse)

Shoot 74-2TCH with primer cord to allow for reservoir pressure monitoring. This is a core hole with 3/4" I.D. tubing which is too small for perforating guns. Therefore, a primer cord will be used to split the tubing and establish pressure communication with the formation.

- Rig up Prime Perforating on well with packoff.
- Split tubing with 10 feet of primer cord centered at 2322 feet
- Pull out of hole and rig down perforators.
